Subject: Mandel/SSND Water Management
Attachments: water management.pdf

Members of the Village Government,

I am enclosing information I have researched regarding the Mandel/SSND development regarding water management on the site. This is only regarding water management and not with the proposed plan of housing options submitted. In particular I am concerned with the flow of water to the "Southern Basin(s) "

I am concerned that during heavy rain events this can "flood" the entire southern basin and result in unstable soil allowing trees to uproot and potential water coming on neighboring private property causing flood damage. Please review and add to the "official" comment area of record.

Feel free to reach out to me directly.
