

## Perennials Least Affected by Rabbit Browse

Protecting vulnerable plants with fencing or repellants combined with planting browse-resistant species is the most effective combination. The following list is intended as a general guide and is based on our experience and that of others. However, rabbits may sometimes browse the plants listed below and may conversely avoid ones that are not listed. When the rabbits' preferred food is scarce, there are few species that they won't eat.

### Suggested Species

Achillea spp. (Yarrow)	Bergenia spp. (Bergenia)	Hemerocallis spp. (Daylily)
Aconitum spp. (Monkshood)	Brunnera macrophylla (Siberian Bugloss)	Heuchera (Coral Bells)
Actea rubra (Red Baneberry)	Campanula spp. (Bellflower)	Iris spp. (Iris)
Alchemilla ( Lady's Mantel)	Cimicifuga racemosa (Black Snakeroot)	Lamium (Dead Nettle)
Allium spp. (Ornamental Onion)	Clematis hybrids (Clematis)	Liatris spp. (Gayfeather)
Amsonia spp. (Amsonia)	Coreopsis spp. (Coreopsis)	Lonicera spp. (Honeysuckle)
Anemone spp. (Anemone)	Delphinium spp. (Delphinium)	Nepeta spp. (Catmint)
Aquilegia spp. (Columbine)	Dicentra spp. (Bleeding Heart)	Paeonia spp (Peony)
Arisaema triphyllum (Jack in the Pulpit)	Epimedium spp. (Bishop's Hat)	Penstemon digitalis (Husker's Red Penstemon)
Artemesia spp. (Artemesia)	Eupatorium maculatum (Joe Pye Weed)	Pulmonaria spp. (Lungwort)
Asarum (Wild Ginger)	Filipendula rubra (Queen of the Prairie)	Salvia spp. (Sage)
Asclepias tuberosa (Butterflyweed)	Galium odoratum (Sweet Woodruff)	Sedurn spp. (Sedum)
Astilbe spp. (Astilbe)	Geranium spp. (Hardy Geranium)	Sisyrinchium spp. (Blue-Eyed Grass)
Astrantia major (Masterwort)	Helleborus spp. (Lenten Rose)	Stachys spp. (Lambs Ear)
